

Press Release

SYSTRAN celebrates its golden anniversary as a machine translation company by looking back at their most memorable milestones.

In the last 50 years, SYSTRAN has had the great pleasure of delivering machine translation capabilities to the Fortune 500, unicorn start-ups, education institutions, non-profits, government communities and LSPs worldwide. They've arrived at a unique vantage point across industries such as banking, finance, manufacturing, legal, internet, security, software, wearable devices and IoT.

"To have experienced decades of SYSTRAN's impact on technology and culture has been a gift," says Denis A. Gachot, CEO of SYSTRAN Software Inc. "However, what I find more inspiring is the intention of our founder Peter Toma when starting SYSTRAN."

"I felt deeply that I had to devote my energy to the elimination of world conflict causing factors. As a first step to overcome the language problem, I felt that I should know as many languages as possible and use technology so others could be understood." - Peter Toma

From powering the translation that helped the U.S. and Soviet astronauts communicate, bringing on-line translation to the internet and assisting the F500 corporations to collaborate globally, these moments not only commemorate their longevity, but they also show their values.

Commenting on reaching 50, Chairman Mr. Chang-Jin Ji believes that SYSTRAN would not be celebrating today if it was not for the dedication of employees around the globe to customer support and innovation. "I truly thank them and the loyal support we have received from our customers."

Looking to the future, this month SYSTRAN will launch a new generation of their server solution, SYSTRAN Pure Neural® Server, that pushes the quality and fluency boundary further than ever before explains Jean Senellart, Global CTO of SYSTRAN. "This new release benefits from the state-of-the-art research in neural translation and brings to our customers these technologies for their specialized models in a fully integrated solution. Our commitment to Open Source through the OpenNMT project, now comprising more than 1,600 members, has been pushing our development teams to achieve excellence, and is raising the bar for the whole industry."

About SYSTRAN

SYSTRAN, that will be 50 years old this year, is a pioneer in machine translation technologies. The company helps worldwide organizations in their digital transformation with advanced and secure translation solutions. In 2016, SYSTRAN further innovated and launched its new generation of engines that combine neural networks and artificial intelligence to offer companies a translation quality very close to human translation and increase their productivity gains in various areas such as: collaboration, content production, customer support, electronic investigation, analysis of Big Data, e-commerce...

SYSTRAN provides a tailor-made solution that meets the language specificities of each domain and corporate communication guidelines. Thanks to an open and scalable architecture, SYSTRAN's solutions integrate seamlessly into existing IT applications and infrastructure, providing to professionals higher efficiency.
